SUMMARY

Business Analyst and Product Owner with 3+ years' experience delivering digital products across start-up and corporate environments. Skilled in Design Thinking, requirements elicitation and analysis, process improvement, solution design and stakeholder collaboration across business and technical teams. Currently completing a Master of IT in Tasmania while expanding into hands-on software delivery, including an end-to-end staff web platform and interpreter mobile app for a Hobart business, a production SaaS platform with active users, and recognised projects at GovHack and the IBM watsonx.ai Hackathon. Experienced in taking problems from discovery and workflow analysis through product definition, implementation, testing and iteration. Seeking opportunities that combine business analysis, product delivery and technology implementation to create practical value for organisations and users.

KEY CAPABILITIES

Business & Requirements Analysis	Product Discovery & Strategy	Specification-driven Development
Business Process Improvement	Data Model Design	Stakeholder Communication
Cross-Functional Delivery	Design Thinking	User Research
Agile Delivery	Workflow Automation	End-to-End Product Ownership

STRENGTHS

- Translates complex business needs into clear requirements, workflows and practical solution designs.
- Bridges business, user and technical perspectives through structured facilitation and stakeholder collaboration.
- Applies Design Thinking and process analysis to uncover root problems, assess options and guide delivery.
- Combines structured business analysis with hands-on product delivery across data modelling, software implementation, testing and iteration.

TOOLS

Microsoft 365 / Jira / Confluence / ClaudeCode / Codex / Linear / Figma / Miro / VSCode / Google Workspace

PROFESSIONAL EXPERIENCE

Amigos Interpreters & Translators Business Analyst & Developer

July 26 - Present

Building a staff web platform and interpreter mobile app for a Hobart interpreting business, replacing fragmented email and paper processes with connected job matching, compliance, completion and payment workflows. Combining business analysis, product ownership and software development to improve operational efficiency, streamline communication, strengthen compliance and save time for staff and interpreters.

- Working with the owner and interpreter users to map current-state processes, elicit and validate requirements, define future-state workflows and prioritise scope.
- Designing new capabilities including interpreter matching, sequential job offers, compliance monitoring, digital job completion and automated pay calculation.

- Owning end-to-end delivery across discovery, process analysis, solution design, system architecture, implementation, testing and iteration.
- Using agentic, specification-driven development to design relational data models and implement backend services, staff web and mobile interfaces, email workflows and third-party API integrations.

Tech Stack: Next.js, React, React Native, TypeScript, SupabaseAuth, PostgreSQL, Vercel, Expo

SabaiHub

Founder & Product Developer

December 25 - June 26

Built and launched a SaaS platform for Thai massage businesses in **Australia**, consolidating appointments, staff operations and business management into one product used in live shop operations.

- Delivered the initial production release within three months and onboarded active business users.
- Led delivery from discovery and requirements through solution design, implementation, testing and deployment.
- Translated real business workflows into the system architecture, data model and application modules.
- Used production feedback to resolve issues, refine workflows and improve reliability.
- Applied AI-assisted, specification-driven development to accelerate delivery while retaining product and technical ownership.

Allianz(Thailand) (Life&Health Insurance)

IT Business Analyst

February 2023 - December 2023

Worked closely with the Product Owner, a development team, and business unit users, focusing on enhancing a tablet application and other services for insurance agents and the agent's support team, handling projects and initiatives upon requests.

- Translated business requirements into functional specifications and user stories for a tablet application and related services supporting insurance agents and agent support teams.
- Led UX discovery through stakeholder and user interviews, then facilitated Design Thinking workshops to define personas, problem statements, and solution directions across business units to share the same picture and gain buy-in.
- Summarised scope of work, gained domain knowledge and partnered with designers, business users, and delivery teams to refine scope, shape user interfaces, and support usability testing and UAT.

Ever Medical Technologies

Product Owner

April 2022 - November 2022

A health tech startup with a goal to build a state-of-the-art hospital information system(HIS) with a leading medical school in Thailand to improve business processes to revolutionise the HIS System in Thailand.

- Owned discovery-to-delivery for an outpatient module within a cross-functional Scrum team, working with hospital executives and medical stakeholders to define product scope and priorities.
- Mapped as-is and to-be workflows, journey maps, and requirements to translate complex hospital processes and user needs into feasible product concepts and MVP scope.
- Collaborated with design, engineering, and medical experts to prioritise backlog items and balance trade-offs across usability, performance, and delivery timelines.

Seekster

IT Business Analyst

October 2020 - March 2022

Seekster is a leading startup in Thailand that connects users with trusted service providers for various home and office tasks, including cleaning and maintenance. It simplifies the process of finding and booking reliable services, ensuring convenience for users.

- Analysed business and user requirements to shape workflows, feature scope, and roadmap inputs for MVP development with the product and engineering teams.

- Conducted interviews with end users and business stakeholders to identify pain points, synthesise insights, and translate into actionable product requirements.
- Worked closely with product design, engineering, and the CTO to validate feasibility and support delivery across the software development lifecycle.

Freelance

Design Thinking Facilitator

May 2019 - December 2023

- Led and delivered 20+ Design Thinking workshops for operational and managerial teams across major Thai corporations and government agencies, including SCG, PTT EP, and Central Group.
- Used journey mapping, empathy mapping, and structured facilitation to frame complex problems, align stakeholders, and drive UX-focused solution ideation.

ACHIEVEMENTS

GovHack 2025 | Runner-up, The Red Tape Navigator (Department of Finance)

November 2025

- Only selected project from Tasmania, developed as a solo entry. Designed and built MyBusiness.gov, an AI-powered platform that gives small businesses a single ABN-based entry point to identify relevant permits, licences, and support programs instead of navigating fragmented government websites.

IBM watsonx.ai Hackathon 2025 | Global Top 50, RegionalMate

September 2025

- Led the design and development of RegionalMate, an AI-powered relocation planning platform helping users evaluate moves from metropolitan to regional Australia. Conducted user research, business process analysis, requirements gathering, and journey mapping to turn fragmented decisions across jobs, housing, schools, and lifestyle into a structured, user-centred solution.

OTHER EXPERIENCE

Team member - Student Success Team - University of Tasmania

July 2026 - Present

- Delivering personalised student support through telephone outreach, helping students access services and navigate their university journey.

Bartender - The Pavilion @ Salamanca

November 2025 - Present

- Worked in a fast-paced hospitality environment, developing strong communication, teamwork, and problem-solving skills while maintaining service quality under pressure.

COMMUNITY AND VOLUNTARY EXPERIENCE

Committee Member - IIBA Hobart Branch

2026 - Present

Volunteer - PMI Tasmanian Chapter

2026 - Present

EDUCATION

Master of Information Technology and Systems

2025 - May 2027

The University of Tasmania

Bachelor of Political Science - Major in politics and government

2015 - 2019

Thammasat University
